## Baclofen Powder

### Description

#### Baclofen Powder

---

#### Background

Baclofen is a muscle relaxant and antispastic used for the alleviation of signs and symptoms of spasticity resulting from multiple sclerosis, particularly for the relief of flexor spasms and concomitant pain, clonus, and muscular rigidity. Baclofen may also be of some value in patients with spinal cord injuries and other spinal cord diseases (1).

Baclofen is commercially available as 10mg and 20mg oral tablets and for intrathecal injection in concentrations of 0.05 mg/ml, 0.5 mg/ml, and 2 mg/ml (1-2).

#### Regulatory Status

FDA-approved indication: Baclofen (oral) is a muscle relaxant and antispastic used for the alleviation of signs and symptoms of spasticity resulting from multiple sclerosis, particularly for the relief of flexor spasms and concomitant pain, clonus, and muscular rigidity (1).

Baclofen (intrathecal) is indicated for use in the management of severe spasticity. This includes spasticity of spinal cord origin, spasticity of cerebral origin (2).

Safety and efficacy in patients younger than 12 years of age has not been established for the oral dosage form (1).

Safety and efficacy in patients younger than 4 years of age has not been established for the intrathecal dosage form (2).

### Related policies

Baclofen, Cyclobenzaprine powder, Tizanidine powder

### Policy

*This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.*

Baclofen powder may be considered **medically necessary** in patients for the alleviation of signs and symptoms of spasticity and if the conditions indicated below are met.

Baclofen powder may be considered **investigational** for all other indications.

## Prior-Approval Requirements

### Diagnosis

Patient must have the following:

Spasticity

**AND ONE** of the following:

1. The requested **ORAL** dose does not exceed 20 mg/ unit
2. The requested **INTRATHECAL** dose does not exceed a concentration of 2mg/ml

**AND ONE** of the following:

1. The requested strength is not commercially available
2. **NOT** available commercially due to shortage

---

## Prior – Approval Renewal Requirements

Same as above

**Rationale****Summary**

Baclofen (oral) is a muscle relaxant and antispastic used for the alleviation of signs and symptoms of spasticity resulting from multiple sclerosis, particularly for the relief of flexor spasms and concomitant pain, clonus, and muscular rigidity. Baclofen (intrathecal) is indicated for use in the management of severe spasticity. This includes spasticity of spinal cord origin, spasticity of cerebral origin. There are no clinically controlled studies confirming that topical application of Baclofen is safe and effective (1-2).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Baclofen while maintaining optimal therapeutic outcomes.
