## Evrysdi

### Description

#### Evrysdi (risdiplam) for oral solution

#### Background

Evrysdi (risdiplam) is a survival of motor neuron 2 (SMN2) splicing modifier designed to treat patients with spinal muscular atrophy (SMA) caused by mutations in chromosome 5q that lead to SMN protein deficiency. Evrysdi was shown to increase exon 7 inclusion in SMN2 messenger ribonucleic acid (mRNA) transcripts and production of full-length SMN protein in the brain (1).

#### Regulatory Status

FDA-approved indication: Evrysdi is a survival of motor neuron 2 (SMN2) splicing modifier indicated for the treatment of spinal muscular atrophy (SMA) in pediatric and adult patients (1).

In the clinical studies done for Evrysdi, the patients in these studies had Type I, II, or III SMA. The clinical studies did not include Types 0 and IV (1).

Evrysdi powder must be constituted to the oral solution by a pharmacist prior to dispensing to the patient. The constituted oral solution must be kept in the original amber bottle to protect from light and stored in a refrigerator. Any unused portion should be discarded 64 days after constitution (1).

Evrysdi may cause embryofetal harm when administered to a pregnant woman. Female patients of reproductive potential should undergo pregnancy testing prior to treatment and be advised to use effective contraception during treatment with Evrysdi and for at least 1 month after the last dose (1).

---

Multiple tools have been developed in order to determine a baseline motor milestone score for patients with SMA. These assessments can also be utilized to measure improvement and include: Hammersmith Infant Neurologic Exam (HINE), Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP-INTEND), Upper Limb Module (ULM), and the Hammersmith Functional Motor Scale (HFMS) / Hammersmith Functional Motor Scale - Expanded (HFMSE) (2-3).

The safety and effectiveness of Evrysdi in pediatric patients have been established (1).

#### **Related policies**

Spinraza, Zolgensma

#### **Policy**

*This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.*

Evrysdi may be considered **medically necessary** if the conditions indicated below are met.

Evrysdi may be considered **investigational** for all other indications.

### **Prior-Approval Requirements**

**Age** ≤ 25 years of age

#### **Diagnosis**

Patient must have the following:

Spinal Muscular Atrophy (SMA)

**AND ALL** of the following:

- a. Diagnosis confirmed by genetic testing demonstrating bi-allelic mutations in the survival motor neuron 1 (SMN1) gene with **ONE** of the following:
  - i. Deletion of both copies of the SMN1 gene **OR**
  - ii. Pathogenic variant(s) in both copies of the SMN1 gene
- b. Patient has **ONE** of the following:

---

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	January 1, 2024
<b>Subsection:</b>	Neuromuscular Agents	<b>Original Policy Date:</b>	September 11, 2020
<b>Subject:</b>	Evrysdi	<b>Page:</b>	3 of 6

---

- i. Patient is symptomatic with documentation of a genetic test confirming 2 to 4 copies of the SMN2 gene
  - ii. Patient is asymptomatic with documentation of a genetic test confirming 2 to 3 copies of the SMN2 gene
- c. Patient is not on permanent ventilator dependence
- d. Obtain a baseline motor milestone score from **ONE** the following assessments:
  - i. Hammersmith Infant Neurologic Exam (HINE)
  - ii. Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP-INTEND)
  - iii. Upper Limb Module (ULM)
  - iv. Hammersmith Functional Motor Scale (HFMS) / Hammersmith Functional Motor Scale - Expanded (HFMSE)
  - v. Motor Function Measure 32 (MFM32)
  - vi. Revised Upper Limb Module (RULM)
- e. Prescribed by a neurologist, neuromuscular specialist, or pediatrician with expertise in treating SMA
- f. **NOT** used in combination with nusinersen
- g. Patient has not previously received gene therapy for SMA (see Appendix 1)
- h. Patient is not concurrently enrolled in a clinical trial for an experimental therapy for SMA

## Prior – Approval *Renewal* Requirements

**Age** ≤ 25 years of age

### Diagnosis

Patient must have the following:

1. Spinal Muscular Atrophy (SMA)

**AND ALL** of the following:

- a. Clinically meaningful improvement or stabilization in motor milestones from baseline
- b. **NOT** used in combination with nusinersen
- c. Patient has not previously received gene therapy for SMA (see Appendix 1)

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	January 1, 2024
<b>Subsection:</b>	Neuromuscular Agents	<b>Original Policy Date:</b>	September 11, 2020
<b>Subject:</b>	Evrysdi	<b>Page:</b>	4 of 6

### Policy Guidelines

#### Pre - PA Allowance

None

#### Prior - Approval Limits

**Quantity** 7 bottles (560 mL) per 84 days

**Duration** 12 months

#### Prior – Approval *Renewal* Limits

Same as above

### Rationale

#### Summary

Evrysdi (risdiplam) is a survival of motor neuron 2 (SMN2) splicing modifier designed to treat patients with spinal muscular atrophy (SMA) caused by mutations in chromosome 5q that lead to SMN protein deficiency. Evrysdi was shown to increase exon 7 inclusion in SMN2 messenger ribonucleic acid (mRNA) transcripts and production of full-length SMN protein in the brain. The safety and effectiveness of Evrysdi in pediatric patients have been established (1).

Prior approval is required to ensure the safe, clinically appropriate, and cost-effective use of Evrysdi while maintaining optimal therapeutic outcomes.

### Policy History

Date	Action
September 2020	Addition to PA

---

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	January 1, 2024
<b>Subsection:</b>	Neuromuscular Agents	<b>Original Policy Date:</b>	September 11, 2020
<b>Subject:</b>	Evrysdi	<b>Page:</b>	5 of 6

---

December 2020	Annual review
March 2021	Annual review
March 2022	Annual review and reference update
April 2022	Per FEP: Changed age requirement from 2 months of age and older to 2 months to 25 years of age. Updated genetic testing requirement. Added requirement for prescriber needing to have expertise in treating SMA. Added requirement excluding patients enrolled in clinical trials for SMA. Removed contraception requirement. Removed continuation requirement for 2 or 1 point decrease in motor milestone score for type II and type III SMA. Added less specific continuation requirement for improvement and stabilization in motor milestones from baseline. Changed PA duration to 12 months.
June 2022	Annual review. Revised age requirement to ≤ 25 years of age (to include patients aged less than 2 months) per PI update
September 2022	Annual review
March 2023	Annual review and reference update
December 2023	Annual review and reference update. Per SME, added pregnancy test statement to regulatory status.
