Alecensa

Description

Alecensa (alectinib)

Background

Alecensa (alectinib) is an oral medication indicated for the treatment of patients with non-small cell lung cancer (NSCLC) that is anaplastic lymphoma kinase (ALK)-positive. Alecensa is an inhibitor of receptor tyrosine kinases including ALK and RET (rearranged during transfection). Translocations can affect the ALK gene resulting in the expression of oncogenic fusion proteins. The formation of ALK fusion proteins results in activation and dysregulation of the gene's expression and signaling which can contribute to increased cell proliferation and survival in tumors expressing these proteins. The administration of Alecensa in tumors carrying ALK fusions may result in antitumor activity and prolonged survival. Treatment with Alecensa should continue until disease progression or unacceptable toxicity (1).

Regulatory Status

FDA-approved indications: Alecensa is a kinase inhibitor indicated for (1):

- adjuvant treatment in adult patients following tumor resection of anaplastic lymphoma kinase (ALK)-positive non-small cell lung cancer (NSCLC) (tumors \geq 4 cm or node positive) as detected by an FDA-approved test.
- treatment of patients with ALK-positive metastatic NSCLC as detected by an FDA-approved test.

Liver function tests should be monitored every 2 weeks during the first 3 months of treatment, and then once a month and as clinically indicated. In case of severe ALT, AST, or bilirubin elevations, withhold, then reduce dose, or permanently discontinue Alecensa (1).

The safety of Alecensa in patients with severe renal impairment (creatinine clearance (CrCl) less than 30 mL/min) or end-stage renal disease has not been studied (1).

The safety and effectiveness of Alecensa in pediatric patients have not been established (1).

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Alecensa may be considered **medically necessary** if the conditions indicated below are met.

Alecensa may be considered **investigational** for all other indications.

Prior-Approval Requirements

Age 18 years of age and older

Diagnoses

Patient must have **ONE** of the following:

1. Metastatic non-small cell lung cancer (NSCLC)
2. Adjuvant treatment of non-small cell lung cancer (NSCLC) following tumor resection
 - a. Tumors ≥ 4 cm **OR** node positive

AND ALL of the following:

1. Anaplastic lymphoma kinase (ALK)-positive as determined by FDA-approved test
2. **NO** severe renal impairment (CrCl less than 30 mL/min) or end stage renal

Section:	Prescription Drugs	Effective Date:	January 1, 2025
Subsection:	Antineoplastic Agents	Original Policy Date:	January 15, 2016
Subject:	Alecensa	Page:	3 of 5

- disease
3. Prescriber agrees to monitor AST, ALT, and total bilirubin

Prior – Approval *Renewal* Requirements

Age 18 years of age and older

Diagnoses

Patient must have **ONE** of the following:

1. Metastatic non-small cell lung cancer (NSCLC)
2. Adjuvant treatment of non-small cell lung cancer (NSCLC) following tumor resection

AND ALL of the following:

1. **NO** disease progression or unacceptable toxicity
2. **NO** severe renal impairment (CrCl less than 30 mL/min) or end stage renal disease
3. Prescriber agrees to monitor AST, ALT, and total bilirubin

Policy Guidelines

Pre - PA Allowance

None

Prior - Approval Limits

Quantity 1,200 mg per day

Duration 12 months

Prior – Approval *Renewal* Limits

Quantity 1,200 mg per day

Duration 12 months

*Adjuvant treatment of NSCLC following tumor resection is limited to **ONE** renewal **ONLY**

Rationale

Summary

Alecensa (alectinib) is a kinase inhibitor indicated for the treatment of patients with non-small cell lung cancer (NSCLC) that is anaplastic lymphoma kinase (ALK)-positive. The safety of Alecensa in patients with severe renal impairment (creatinine clearance less than 30 mL/min) or end-stage renal disease has not been studied. The safety and effectiveness of Alecensa in pediatric patients have not been established (1).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Alecensa while maintaining optimal therapeutic outcomes.
