Lorbrena

Description

Lorbrena (lorlatinib)

Background

Lorbrena (lorlatinib) is a kinase inhibitor with in vitro activity against anaplastic lymphoma kinase (ALK) and ROS1 as well as other kinases. Lorbrena demonstrated in vitro activity against multiple mutant forms of the ALK enzyme, including some mutations detected in tumors at the time of disease progression on crizotinib and other ALK inhibitors (1).

Regulatory Status

FDA-approved indication: Lorbrena is a kinase inhibitor indicated for the treatment of adult patients with metastatic non-small cell lung cancer (NSCLC) whose tumors are anaplastic lymphoma kinase (ALK)-positive as detected by an FDA-approved test (1).

Lorbrena has warnings for risk of serious hepatotoxicity with concomitant use of strong CYP3A4 inducers, central nervous system effects (including seizures, hallucinations, and changes in cognitive function, mood, speech, mental status, and sleep), hyperlipidemia, atrioventricular block, interstitial lung disease/pneumonitis, hypertension, hyperglycemia and embryo-fetal toxicity (1).

Serum cholesterol and triglycerides should be monitored before initiating Lorbrena, 1 and 2 months after initiating Lorbrena, and periodically thereafter. ECG should be monitored prior to initiating Lorbrena and periodically thereafter (1).

Section:	Prescription Drugs	Effective Date:	January 1, 2025
Subsection:	Antineoplastic Agents	Original Policy Date:	November 16, 2018
Subject:	Lorbrena	Page:	2 of 5

Lorbrena can cause fetal harm when administered to a pregnant woman. Pregnant women should be advised of the potential risk to a fetus. Females of reproductive potential should be advised to use an effective non-hormonal method of contraception, since Lorbrena can render hormonal contraceptives ineffective, during treatment with Lorbrena and for at least 6 months after the final dose. Males with female partners of reproductive potential should be advised to use effective contraception during treatment with Lorbrena and for 3 months after the final dose (1).

The safety and effectiveness of Lorbrena in pediatric patients have not been established (1).

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Lorbrena may be considered **medically necessary** if the conditions indicated below are met.

Lorbrena may be considered **investigational** for all other indications.

Prior-Approval Requirements

Age 18 years of age or older

Diagnosis

Patient must have the following:

Metastatic non-small cell lung cancer (NSCLC)

AND ALL of the following:

1. Anaplastic lymphoma kinase (ALK)-positive as detected by an FDA-approved test
2. Prescriber agrees to monitor the following:
 - a. ECG
 - b. Serum cholesterol and triglycerides

Section:	Prescription Drugs	Effective Date:	January 1, 2025
Subsection:	Antineoplastic Agents	Original Policy Date:	November 16, 2018
Subject:	Lorbrena	Page:	3 of 5

3. Females of reproductive potential **only**: patient will be advised to use effective non-hormonal contraception during treatment with Lorbrena and for 6 months after the final dose
4. Males with female partners of reproductive potential **only**: patient will be advised to use effective contraception during treatment with Lorbrena and for 3 months after the final dose

Prior – Approval *Renewal* Requirements

Age 18 years of age or older

Diagnosis

Patient must have the following:

Metastatic non-small cell lung cancer (NSCLC)

AND ALL of the following:

1. **NO** disease progression or unacceptable toxicity
2. Prescriber agrees to monitor the following:
 - a. ECG
 - b. Serum cholesterol and triglycerides
3. Females of reproductive potential **only**: patient will be advised to use effective non-hormonal contraception during treatment with Lorbrena and for 6 months after the final dose
4. Males with female partners of reproductive potential **only**: patient will be advised to use effective contraception during treatment with Lorbrena and for 3 months after the final dose

Policy Guidelines

Pre - PA Allowance

None

Prior - Approval Limits

Quantity

Strength	Quantity
25 mg	270 tablets per 90 days OR
100 mg	90 tablets per 90 days

Section:	Prescription Drugs	Effective Date:	January 1, 2025
Subsection:	Antineoplastic Agents	Original Policy Date:	November 16, 2018
Subject:	Lorbrena	Page:	4 of 5

Duration 12 months

Prior – Approval *Renewal* Limits

Same as above

Rationale

Summary

Lorbrena (lorlatinib) is a kinase inhibitor indicated for the treatment of adult patients with metastatic non-small cell lung cancer (NSCLC) whose tumors are anaplastic lymphoma kinase (ALK)-positive. Lorbrena has warnings for risk of serious hepatotoxicity with concomitant use of strong CYP3A4 inducers, central nervous system effects, hyperlipidemia, atrioventricular block, interstitial lung disease/pneumonitis, hypertension, hyperglycemia, and embryo-fetal toxicity. The safety and effectiveness of Lorbrena in pediatric patients have not been established (1).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Lorbrena while maintaining optimal therapeutic outcomes.
