Botox

Description

Botox (onabotulinumtoxinA)

Background

Botulinum toxin (abbreviated either as BTX or BoNT) is a protein neurotoxin produced by the bacterium *Clostridium botulinum*. The botulinum toxins are characterized as 7 separate neurotoxins (labeled as types A, B, C [C1, C2], D, E, F, and G), which are antigenically and serologically distinct but structurally similar. The neuromuscular blockade is achieved through prevention of docking/fusion of neurosecretory with the nerve synapse plasma membrane and release of neurotransmitters (1).

The various botulinum toxins have approved cosmetic and non-aesthetic uses. They possess individual potencies, and care is required to assure proper use and avoid medication errors. Recent changes to the established drug names by the FDA were intended to reinforce these differences and prevent medication errors (1-2).

Regulatory Status

FDA-approved indications: Botox is an acetylcholine release inhibitor and a neuromuscular blocking agent indicated for: (3)

- 1. Treatment of overactive bladder (OAB) with symptoms of urge urinary incontinence, urgency, and frequency, in adults who have an inadequate response to or are intolerant of an anticholinergic medication.
- 2. Treatment of urinary incontinence due to detrusor over-activity associated with a neurologic condition [e.g., spinal cord injury (SCI), multiple sclerosis (MS)] in adults who have an inadequate response to or are intolerant of an anticholinergic medication.

| Section: | Prescription Drugs | Effective Date: | January 1, 2025 |
|-------------|---------------------|------------------------------|-----------------|
| Subsection: | Neuromuscular Drugs | Original Policy Date: | October 1, 2001 |
| Subject: | Botox | Page: | 2 of 11 |

- 3. Treatment of neurogenic detrusor overactivity (NDO) in pediatric patients 5 years of age and older who have an inadequate response to or are intolerant of anticholinergic medication.
- 4. Prophylaxis of headaches in adult patients with chronic migraine (≥15 days per month with headache lasting 4 hours a day or longer).
- 5. Treatment of spasticity in patients 2 years of age and older.
- 6. Treatment of cervical dystonia in adult patients, to reduce the severity of abnormal head position and neck pain.
- 7. Treatment of severe axillary hyperhidrosis that is inadequately managed by topical agents in adult patients.
- 8. Treatment of blepharospasm associated with dystonia in patients \geq 12 years of age.
- 9. Treatment of strabismus in patients \geq 12 years of age.

Limitations of Use:

Safety and effectiveness of Botox have not been established for the prophylaxis of episodic migraine (14 headache days or fewer per month) or for the treatment of hyperhidrosis in body areas other than axillary (3).

Off-Label Uses: (4-11)

- 1. Achalasia
- 2. Chronic anal fissures
- 3. Essential tremor
- 4. Excessive salivation secondary to advanced Parkinson's disease
- 5. Hemifacial spasm
- 6. Spasmodic dysphonia (laryngeal dystonia)

Safety and effectiveness of Botox have not been established for the treatment of hyperhidrosis in body areas other than axillary (4).

Botulinum toxins are not interchangeable. Total accumulated dose should not exceed 400 IU over a 3-month interval (3).

Some products have cosmetic indications which are excluded from coverage.

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Botox may be considered **medically necessary** if the conditions indicated below are met.

Botox may be considered **investigational** for all other indications.

Prior – Approval Requirements

Age No age restriction

Diagnoses

Patient must have **ONE** of the following:

- 1. Upper and/or lower limb spasticity
- 2. Spastic hemiplegia

AND the following:

a. **NO** dual therapy with other botulinum toxins

Age 5-17 years of age

Diagnosis

Patient must have the following:

- 1. Neurogenic detrusor overactivity (NDO)
 - a. Inadequate response or intolerance to an anticholinergic

AND the following:

- a. **NO** dual therapy with other botulinum toxins
- Age 12 years of age or older

| Section: | Prescription Drugs | Effective Date: | January 1, 2025 |
|-------------|---------------------|------------------------------|-----------------|
| Subsection: | Neuromuscular Drugs | Original Policy Date: | October 1, 2001 |
| Subject: | Botox | Page: | 4 of 11 |

Diagnoses

Patient must have **ONE** of the following:

- 1. Blepharospasm associated with dystonia
- 2. Strabismus

AND the following:

a. NO dual therapy with other botulinum toxins

Age 18 years of age or older

Diagnoses

Patient must have **ONE** of the following:

A. Spasticity disorders

- 1. Hereditary spastic paraplegia
- 2. Hemifacial spasms
- 3. Spasmodic torticollis (clonic twisting of the head)
- 4. Facial Nerve (VII) disorders
- 5. Neuromyelitis optica

B. Movement disorders

- 1. Dystonia
 - a. Cervical (spasmodic torticollis)
 - b. Writer's cramp
 - c. Focal task specific
 - d. Laryngeal (spasmodic dysphonia)
- 2. Essential Tremor
- 3. Orofacial dyskinesia

C. GI/ Sphincter disorders

- 1. Achalasia
- 2. Chronic anal fissures
- 3. Dysphagia
- 4. Sphincter of Oddi dysfunction
- 5. Excessive Salivation

| Section: | Prescription Drugs | Effective Date: | January 1, 2025 |
|-------------|---------------------|-----------------------|-----------------|
| Subsection: | Neuromuscular Drugs | Original Policy Date: | October 1, 2001 |
| Subject: | Botox | Page: | 5 of 11 |

a. Due to Parkinson's disease

D. Bladder

- 1. Overactive bladder (OAB)
 - a. Inadequate response or intolerance to an anticholinergic
- 2. Incontinence associated with a neurologic condition (spinal cord injury, multiple sclerosis, etc.)
 - a. Inadequate response or intolerance to an anticholinergic

E. Other Indications

- 1. Hyperhidrosis
- 2. Prophylaxis of chronic migraine headaches
 - a. Patient is experiencing ≥15 days per month with headache lasting 4 hours a day or longer
 - b. Patient has completed an adequate trial (≥ 8 weeks) of at least ONE of the following:
 - i. Divalproex sodium (Depakote, Depakote ER)
 - ii. Topiramate (Topamax)
 - iii. Gabapentin (Neurontin)
 - iv. Amitriptyline (Elavil)
 - v. Venlafaxine (Effexor)
 - vi. Beta-blocker: atenolol, metoprolol, propranolol, timolol, nadolol
 - vii. Nimodipine or verapamil
 - viii. Naproxen or other NSAID
 - ix. Other oral or injectable migraine prophylactic therapy considered to be appropriate by the requesting physician

AND the following for ALL indications:

a. NO dual therapy with other botulinum toxins

Prior – Approval Renewal Requirements

Age No age restriction

Diagnoses

- 2. Incontinence associated with a neurologic condition (spinal cord injury, multiple sclerosis, etc.)

E. Other Indications

- 1. Hyperhidrosis
- 2. Prophylaxis of chronic migraine headaches
 - a. Response to therapy has shown a 50% reduction in monthly migraine frequency since starting therapy with Botox

AND the following for ALL indications:

a. NO dual therapy with other botulinum toxins

Policy Guidelines

Pre – PA Allowance

None

Prior – Approval Limits

Quantity 100 IU vial 4 vials per 90 days OR

| Section: | Prescription Drugs | Effective Date: | January 1, 2025 |
|-------------|---------------------|------------------------------|-----------------|
| Subsection: | Neuromuscular Drugs | Original Policy Date: | October 1, 2001 |
| Subject: | Botox | Page: | 8 of 11 |

200 IU vial2 vials per 90 days ORAny combination that does not exceed 400 IU per 90 days

Duration 12 months

Prior – Approval Renewal Limits

Same as above

Rationale

Summary

Botulinum toxin (abbreviated either as BTX or BoNT) is a protein neurotoxin produced by the bacterium *Clostridium botulinum*. The botulinum toxins are characterized as 7 separate neurotoxins (labeled as types A, B, C [C1, C2], D, E, F, and G), which are antigenically and serologically distinct but structurally similar (1).

The various botulinum toxins have approved cosmetic and non-aesthetic uses. They possess individual potencies, and care is required to assure proper use and avoid medication errors. Recent changes to the established drug names by the FDA were intended to reinforce these differences and prevent medication errors (1-2).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Botox while maintaining optimal therapeutic outcomes.

Policy History

| Date | Action |
|--------------|---|
| July 2010 | Updated ICD-9 codes, addition of ICD-10 codes, separation of criteria for Botox and Myobloc, and addition of the recent FDA approved diagnosis of spasticity in flexor muscles of the elbow, wrist, and fingers for Botox. BOTOX (onabotulinumtoxinA) for injection is indicated for the treatment of upper limb spasticity in adult patients, to decrease the severity of increased muscle tone in elbow flexors (biceps), wrist flexors (flexor carpi radialis and flexor carpi ulnaris) and finger flexors (flexor digitorum profundus and flexor digitorum sublimis). The efficacy and safety of BOTOX for the treatment of upper limb spasticity were evaluated in three randomized, multi-center, double-blind, placebo-controlled studies. Safety and effectiveness of BOTOX have not been established for the treatment of upper limb spasticity in pediatric patients, and for the treatment of lower limb spasticity in adult and pediatric patients. |
| October 2010 | Updated criteria to mirror newly approved FDA indication for chronic migraine in adults. |

| Section: | Prescription Drugs | Effective Date: | January 1, 2025 |
